Boltzmann η_{maint} vs polygenicity, Hamming-layer Dirichlet, $z^* = 0.5$
Maintenance efficiency at fixed $\mathbb{E}[S] = c$
Gain relative to $n = 16$
default $c = 0.3$, $N = 50$, $V_s = 0.0625$
poster $c = 0.75$, $N = 100$, $V_s = 0.0625$
$c = 0.75$, $N = 20$
weak sel. $c = 0.3$, $V_s = 1$
strong sel. $c = 0.3$, $V_s = 0.02$
$c = 0.3$, $N = 10$
$c = 0.5$, $N = 50$
$c = 0.26$, $N = 50$, $V_s = 0.25$
$\eta_{\text{maint}} = D/(2N(C))$
$\eta(n)\,/\,\eta(16)$
